

Fingertec Time & Attendance/ Access Control system

Titania IT has two basic options available for Fingertec clock systems.

Prices below are based on the TA100C clock, this is a high tech clock with a fingerprint reader.

Other clock configurations and more options are available, we will be happy to provide a tailor-made quote including the options you require, see second page for price indication other devices.

Premium package

TA100C Clock + Ingress (software) + installation/configuration and training + 1 year free support

Price 3500,- NAF ex OB

Yearly support contract is 600,- NAF ex OB, the contract is renewed per year.

Premium Elite package

TA100C Clock + Ingress (software) + installation/configuration and training + 1 year free support + immediate free replacement clock during repair if required.

Price 3800,- NAF ex OB

Yearly support contract is 750,- NAF ex OB, the contract is renewed per year.

The initial work involved is estimated on 8 hours.

Ingress is a standalone software package (multiuser via MySQL or single user via MS Access).

FingerTec also provides a web based system called TimeTec.

The TimeTec system is based on the number of employees and has a yearly renewal fee.

The support contract gives you telephone support / remote support for questions regarding the functionality of the system.

With the Premium package the maximum response time is 2 business days.

The Premium Elite response time is within 1 business day.

Support for problems that are caused by external factors (e.g. incorrect move of the database (to another system)), database corruption caused by other system errors (server/network)) are excluded. Support will then be charged based on the hourly rate (195,- NAF ex OB) of Titania IT N.V.

Please contact us to make an appointment for a demonstration.

We can also provide you with a ROI calculation (Return on Investment) based on your organizations details.

The hardware will keep data if there is a power outage.
 For the use of FacelD4 terminals it is required to use a UPS to cope with power fluctuations.
 A UPS will also better protect your investment against electrical spikes.
